PolyTHF: For highly elastic spandex fibers. As a highly elastic synthetic fiber, spandex, or elastane, is currently a very popular textile material. The advantage of spandex is its elasticity, making spandex-containing clothes very comfortable to wear. Besides clothing, spandex is being gradually applied in the medical and other industries.

A carbanion is an anion in which carbon is trivalent (forms three bonds) and bears a formal negative charge in at least one significant mesomeric contributor (resonance form). Absent  $\pi$  delocalization, carbanions assume a trigonal pyramidal, bent, or linear geometry when the carbanionic carbon is bound to three (e.g., methyl anion), two (e.g., phenyl anion), or one (e.g., acetylide anion ...

One-two punch: An isomerically pure bis-allylic bis-boronate reagent was synthesized and applied in the catalytic enantioselective single allyl transfer to aldehydes. The same reagent could also be converted into the more reactive bis-borinic species to allow the direct two-fold allyl transfer to two aldehydes.

### **Angewandte Chemie International Edition: Vol 0, No 0**

Built to perform: A facile, one-step hydrothermal method is used to synthesize a 3D, symmetric, flowerlike Sb<sub>2</sub>S<sub>3</sub> nanostructure (see figure) for application as a photoelectric material. The structure is composed of numerous nanoneedles, which provided a large void fraction and specific surface area, and has better electrocatalytic activity and charge-transfer ability than that of platinum.

In organic chemistry, an alkene is an unsaturated hydrocarbon that contains at least one carbon-carbon double bond. The words alkene and olefin are often used interchangeably (see nomenclature section below). Acyclic alkenes, with only one double bond and no other functional groups, known as mono-enes, form a homologous series of hydrocarbons with the general formula  $C_n H_{2n}$ .
