

rang and dale pharmacology pdf

Pharmacology is the study of different drugs and their action on the living cells. It is one of the most important and tough subject for medical students.

Lippincott Pharmacology Review - All Medical Books

Pharmacology is the branch of biology concerned with the study of drug action, where a drug can be broadly defined as any man-made, natural, or endogenous (from within body) molecule which exerts a biochemical or physiological effect on the cell, tissue, organ, or organism (sometimes the word pharmacon is used as a term to encompass these endogenous and exogenous bioactive species).

Pharmacology - Wikipedia

Distribution Salbutamol binds to and releases from plasma proteins as necessary. Figure 3: Salbutamol binds to a plasma protein - Galbraith et al. (1994), Katzung (1998) Metabolism Salbutamol absorbed in the gastrointestinal tract has a substantial first pass effect.

Salbutamol - area51.gen.nz

In pharmacology, the clearance is a pharmacokinetic measurement of the volume of plasma from which a substance is completely removed per unit time; the usual units are mL/min. The quantity reflects the rate of drug elimination divided by plasma concentration. The total body clearance will be equal to the renal clearance + hepatic clearance + lung clearance.

Central nervous system stimulants: CNS stimulants
Central nervous system stimulants are drugs that increase the activity of the central nervous system. They are used to treat conditions such as depression, attention deficit hyperactivity disorder (ADHD), and narcolepsy. Common examples include amphetamines, cocaine, and caffeine.

Gamma-aminobutyric acid - Wikipedia

Gamma-aminobutyric acid (GABA) is the most common inhibitory neurotransmitter in the central nervous system. It is synthesized from glutamate and is released from GABAergic neurons. GABA binds to GABA receptors, leading to the opening of chloride channels and hyperpolarization of the postsynaptic cell.
